EDUCATION

Universitas Terbuka — Indonesia
Bachelor of Science in Information Systems (S1) — *Expected 2027*

EXPERIENCE

PT Internusa Duta Makmur — Banyuwangi, Indonesia
Network Engineer — *August 2026 – Present*

- Administer enterprise ISP perimeter infrastructure across Juniper SRX and MX routers, enforcing segmentation across **10+** security zones to eliminate unauthorized lateral pivot paths.
- Audit and optimize **150+** firewall filter rules, stateful security policies, and NAT controls, reducing perimeter attack surface and unauthorized external recon scans by **65%**.
- Analyze **50+ GB** of live packet captures (PCAP) with Wireshark and Python-Scapy, dissecting TCP/IP anomalies, detecting stealth port scans, and neutralizing volumetric DDoS attacks across **10+ Gbps** uplinks.

Independent Bug Bounty — Remote
Security Researcher & Vulnerability Bounty Hunter — *2023 – Present*

- Executed authorized web application penetration tests across **15+** Indonesian municipal and regional government portals, following OWASP WSTG and NIST SP 800-115 assessment standards.
- Discovered and responsibly disclosed **15+** high and critical vulnerabilities (including **SQL Injection**, **IDOR**, and **Broken Access Control**), achieving **100%** verified remediation.
- Engineered automated reconnaissance and parameter fuzzing utilities in Python and Go, accelerating target attack surface mapping workflows by **70%**.
- Authored formal penetration testing reports with reproducible PoCs, CVSS v3.1 severity metrics, and technical remediation roadmaps adopted by engineering teams.

PT Transformasi Data Digital (Hostdata.id) — Surakarta / Remote
Systems Administrator & Security Associate — *April 2026 – May 2026*

- Hardened **50+** Linux production servers against remote exploits and privilege escalation by enforcing CIS-aligned iptables firewalling, fail2ban rate-limiting, and SSH key authentication.
- Triaged security incident alerts under strict **15-minute** SLAs, analyzing **100,000+** daily log events across Linux auth.log, syslog, and Nginx access logs to identify automated exploit payloads.
- Performed post-exploitation incident response and malware eradication across compromised servers, dissecting and removing **20+** obfuscated PHP webshells and persistent backdoors.

TECHNICAL PROJECTS

Nocturne – Autonomous Threat Simulation Framework | *Python, AsyncIO, Scapy* — 2026

- Engineered a modular offensive framework utilizing raw socket manipulation, executing concurrent attack simulation and network fuzzing at **5,000+ packets/sec**.
- Implemented an AST-based exploit syntax validator and asynchronous event loop, reducing exploit verification and telemetry logging overhead to **<1 ms**.

CamouDesk – Stealth Remote Administration Agent | *Go, WebSockets, AES-256-GCM* — 2026

- Built a cross-platform post-exploitation agent in Go with an active footprint under **15 MB RAM**, zero CGO dependencies, and evasion of standard heuristic signatures.
- Secured full-duplex C2 communications using AES-256-GCM authenticated cipher encryption, WebSockets multiplexing, and jittered heartbeat reconnect logic.

CERTIFICATIONS

- **JNCIA-SEC (Juniper Networks Certified Associate - Security)** – Juniper Networks (2026)
- **Junior Cybersecurity Analyst (Path 419)** – Hack The Box Academy (2026)
- **Google Cybersecurity Professional Certificate** – Google (2025)
- **Cisco Network Automation Essentials (DEVNAE) & Network Technician** – Cisco (2026)

TECHNICAL SKILLS

• **Penetration Testing & AppSec:** OWASP Top 10 (SQLi, IDOR, SSRF, XSS, Broken Access Control, CSRF), API Pentesting, Vulnerability Assessment, Threat Modeling, CVSS v3.1, NIST SP 800-115, MITRE ATT&CK;

• **Network Security & Perimeter:** Juniper SRX Firewalls, Security Zones, NAT Policies, IPsec VPN, VLAN Segmentation, BGP, OSPF, Wireshark, Packet Inspection, Traffic Hardening

• **Offensive & Security Tools:** Burp Suite Pro, Nmap, Metasploit, SQLmap, Gobuster, Nikto, BloodHound, Mimikatz, Wireshark, Kali Linux, Fail2ban, iptables, Docker

• **Languages & Automation:** Python (Scapy, AsyncIO, Requests, Pwntools), Go (Golang), Bash, Linux Administration & Hardening (Ubuntu, Debian), Nginx, Git
